

**clean-up  
free of  
spores, dust  
& poison**

**Our dynamic cleaning method for interior rooms against mould attack is free of spores, dust and poison. No costly protective measures against dust have to be taken. This clean-up comes along with several quality checks.**

## Advantage

- ...short clean-up time
- ...quick return to the house/flat
- ...dust-free clean-up
- ...low cost
- ...safety assured by quality checks

## Introduction

Environmental analysts of the company "Messtechnik Gummerum" started more than ten years ago with the development of a spore-, dust- and toxin free decontamination treatment, specialised on inhouse mould. This led to the formation of the company **special-clean.com GmbH.**

## Quality management

- We are
- ...certified in microbiology, environmental analysis, prevention of air pollution
  - ...certified as construction engineers, experts for structural damages
  - ...experts for asbestos acc. to annex 3 of TRGS 519 (Technical Rules for Hazardous Substances)
  - ...hygiene experts for ventilating and air conditioning systems
  - ...certified to work in contaminated areas acc. to BGR 128
  - ...DEKRA-certified as experts for clean-up of mould acc. to the **D-MIR**® standard
  - ...partners of an accredited test laboratory
  - ...partners of certified surveyors
  - ...trained construction biologists
  - ...trained technicians for biologic measurement

We consider and follow guidelines, recommendations and technical instructions published by organisations like the Federal Environmental Agency, the regional health authorities of Baden-Wuerttemberg, and the government safety organisation for the building sector.

## Health risks

Mould in interior rooms may strongly endanger the health of the inhabitants. Key parameters are the quantity and the quality of the mould discovered as well as the constitution of the inhabitants. When inhaled, spores and the metabolites of mould may cause allergic and irritant reactions which can result in asthma, for instance.

## Procedure

In the event of mould attack we concentrate on:

1. Analysis of damage
2. Investigation of causes
3. Planning of clean-up
4. Clean-up acc. to **D-MIR**® quality standard
5. Internal quality management
